November 4, 2020

Dear ASE Visiting Team,

It is my pleasure to write this letter of support for the Collision Repair Technology program at Nashua Community College. The college takes great pride in offering this program to students in the region, and fully recognizes the importance of maintaining a program that is rigorous, high quality and current. The institution has a demonstrable track record of providing collision repair faculty with ongoing training as well as ensuring that tools and equipment are up-to-date with industry standards. Most recently, the college leadership team approved full funding for a Prospot SP5 Smart MIG Pulse Welder and a Garmat 3000 Series Spray Booth. This was an essential purchase to not only improve the student experience but to ensure the program continues to provide students with access to the most current equipment used in industry to allow for authentic course experiences. The college understands the importance of effectively supporting the program and maintains its commitment to maintain the currency of the program.

The college and its administration fully recognizes the value of the self-assessment process and the need to continually improve programming services, and instruction. As such, NCC is appreciative of ASE's role in ensuring the continued growth of the Collision Repair Technology program. Furthermore, we look forward to maintaining this relationship in the coming years.

Please feel free to contact me if I can provide you with any additional information during this accreditation process.

Sincerely,

Lucille Jordan  
President
