

The following is a list of the required tools needed in the Aviation Technology program. The student is required to have the tools available for the required lab classes. The Industry and Transportation Department will arrange a tool day for all students. You will be notified when this tool day has been arranged, usually the middle of August. Various distributors come to the college to take student orders and to show the students the tool sets. Buying from these distributors can save you 50-60%.

AVIATION TECHNOLOGY DEPARTMENT: Basic Required Tool List
